THE DATA DRIVEN RECOVERY PROJECT

Cohort 1
Cohort 2
Project Counties
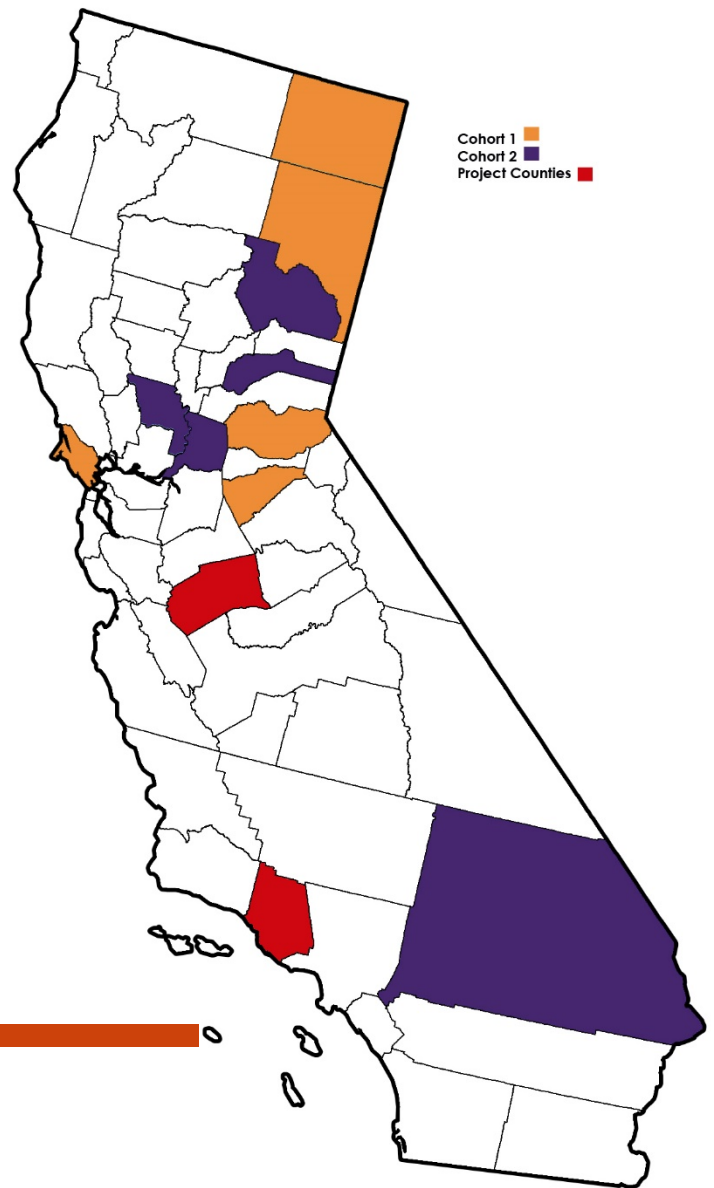

Overview

The Data Driven Recovery Project ("DDRP") is a new initiative supported by Mental Health Services Act (MHSA) funds for counties to improve outcomes for behavioral health clients in the criminal justice system.

The DDRP offers ten Counties, led by Yolo County, an opportunity to identify informed strategies for reducing the incidence, duration, and recurrence of arrests and incarcerations of people with behavioral health conditions.

How does it work?

1. The DDRP supports counties in developing an individualized set of analytic tools to assist in identifying programmatic and systemic innovations in their county through system mapping and the improvement of data resources that connect across agencies.
2. In addition, the DDRP facilitates small inter-county workgroups that can develop operational definitions, materials, programming coding, and build on individual county experiences.

Oversight & Accountability Commission

County specific project work plans may include:

- **A data governance plan** and cross-agency analytic database to identify clients in multiple systems but maintain privacy and confidentiality.

- **Develop baselines** for prevalence and outcomes for justice-involved behavioral health clients.

- **Create process maps** to inform areas for system improvement and client connections.

- **Develop a Sequential Intercept map** to inform system resources, gaps, and priorities.

- **Analyze MHSA funding plans** informed by cross-system analysis.
